

Record Marcellus ROP

SHEAR BITS' *Horizontal Series* PDC Drill bits continue to excel in Marcellus applications. For one operator in Bradford County, the SH513 has consistently produced record ROP vs. competitors - drilling the build and lateral sections of the well in one run, with no bit wear. The aggressive design of the SH513 allows for exceptional ROP while maintaining solid toolface control in the build, and the specialized gage configuration dramatically reduces sliding time in the lateral portion of the well.

Depth Vs. ROP Comparison
